1 Outline

Executive Summary

Chapter 1. Introduction

- 5 1.1. What is SNSA?
- 1.2. Assessment components – i.e. key design features (adaptive design, number of items per cluster/assessment, response formats)
- 1.3. Reporting SNSA results (reporting metric H/M/L, three types of school reports, four types of LA reports)

10 Chapter 2. Numeracy

- 2.1. Assessing numeracy in SNSA (description of organisers, target and actual proportions of items per organiser). Sample items to illustrate organisers?
- 2.2. How numeracy capacity is defined in reporting SNSA (High/Medium/Low per stage) – descriptions as shown on individual report for each category. Sample items to illustrate H/M/L?
- 15 2.3. Overall capacity in numeracy in AY2017-18¹
- 2.3.1. National distribution across H/M/L by stage – by full year and by two half-years²
- 2.3.2. Distribution across H/M/L by stage and gender – by full year and by two half-years
- 2.3.3. Distribution across H/M/L by SIMD quintiles – by full year and by two half-years
- 20 2.3.4. Distribution across H/M/L comparing children and young people with and without ASN, by stage
- 2.3.5. Distribution across H/M/L comparing Looked after / Looked after and accommodated children and young people, with rest of population, by stage
- 25 2.3.6. Distribution across H/M/L comparing children and young people with EAL, with others, by stage
- 2.3.7. Distribution across H/M/L comparing children and young people with different ethnic backgrounds³, with others, by stage
- 2.4. Capacity in numeracy organisers in AY2017-18
- 30 2.4.1. Overall national capacity shown at organiser level (e.g. *Fractions, decimal fractions and percentages*) by stage
- 2.4.2. Capacity shown by gender at organiser level (e.g. *Fractions, decimal fractions and percentages*), by stage⁴

¹ Each subsection to include quantitative information (tables/graphs) and some description – e.g. comment on stronger and weaker capacity demonstrated across categories of each characteristic; comment on differential rate of improvement in capacity at different stages / for different assessments.

² For this and the next two sections, use time of year breakdown. We can investigate whether this breakdown is useful for other characteristics.

³ White Scottish and Other? Or finer categorisation? What is SG's preference?

⁴ Each subsection to include quantitative information (tables/graphs) and some description – e.g. comment on stronger and weaker capacity demonstrated across categories of each characteristic; comment on differential rate of improvement

2.4.3. Capacity shown by SIMD quintile at organiser level (e.g. *Fractions, decimal fractions and percentages*), by stage

35 Chapter 3. Reading / Literacy

3.1. Assessing reading/literacy in SNSA (description of organisers, target and actual proportions of items per organiser). Explanation of why Primary 1 is 'literacy' rather than 'reading' Sample items to illustrate organisers?

40 3.2. How reading/literacy capacity is defined in reporting SNSA (High/Medium/Low per stage) – descriptions as shown on individual report for each category. Sample items to illustrate H/M/L?

3.3. Overall capacity in reading/literacy in AY2017-18⁵

3.3.1. National distribution across H/M/L by stage – by full year and by two half-years⁶

3.3.2. Distribution across H/M/L by stage and gender – by full year and by two half-years

45 3.3.3. Distribution across H/M/L by SIMD quintiles – by full year and by two half-years

3.3.4. Distribution across H/M/L comparing children and young people with and without ASN, by stage

3.3.5. Distribution across H/M/L comparing Looked after / Looked after and accommodated children and young people, with rest of population, by stage

50 3.3.6. Distribution across H/M/L comparing children and young people with EAL, with others, by stage

3.3.7. Distribution across H/M/L comparing children and young people with different ethnic backgrounds⁷, with others, by stage

3.4. Capacity in reading/literacy organisers in AY2017-18

55 3.4.1. Overall national capacity shown at organiser level (e.g. *Tools for reading*) by stage

3.4.2. Capacity shown by gender at organiser level (e.g. *Tools for reading*), by stage⁸

3.4.3. Capacity shown by SIMD quintile at organiser level (e.g. *Tools for reading*), by stage

Chapter 4. Writing

60 4.1. Assessing writing in SNSA (description of organisers, target and actual proportions of items per organiser). Sample items to illustrate organisers?

4.2. How writing capacity is defined in reporting SNSA (High/Medium/Low per stage) – descriptions as shown on individual report for each category. Sample items to illustrate H/M/L?

in capacity at different stages / for different assessments. Suggest restricting this level of analysis to Gender and SIMD subgroups.

⁵ Each subsection to include quantitative information (tables/graphs) and some description – e.g. comment on stronger and weaker capacity demonstrated across categories of each characteristic; comment on differential rate of improvement in capacity at different stages / for different assessments.

⁶ For this and the next two sections, use time of year breakdown. Can investigate whether this breakdown is useful for other characteristics.

⁷ White Scottish and Other? Or finer categorisation – preference of SG?

⁸ Each subsection to include quantitative information (tables/graphs) and some description – e.g. comment on stronger and weaker capacity demonstrated across categories of each characteristic; comment on differential rate of improvement in capacity at different stages / for different assessments. Suggest restricting this level of analysis to Gender and SIMD subgroups.

- 4.3. Overall capacity in writing in AY2017-18⁹
- 65 4.3.1. National distribution across H/M/L by stage – by full year and by two half-years¹⁰
- 4.3.2. Distribution across H/M/L by stage and gender – by full year and by two half-years
- 4.3.3. Distribution across H/M/L by SIMD quintiles – by full year and by two half-years
- 4.3.4. Distribution across H/M/L comparing children and young people with and without ASN, by stage
- 70 4.3.5. Distribution across H/M/L comparing Looked after / Looked after and accommodated children and young people, with rest of population, by stage
- 4.3.6. Distribution across H/M/L comparing children and young people with EAL, with others, by stage
- 75 4.3.7. Distribution across H/M/L comparing children and young people with different ethnic backgrounds¹¹, with others, by stage
- 4.4. Capacity in writing organisers in AY2017-18
- 4.4.1. Overall national capacity shown at organiser level (e.g. *Spelling*) by stage
- 4.4.2. Capacity shown by gender at organiser level (e.g. *Spelling*), by stage¹²
- 4.4.3. Capacity shown by SIMD quintile at organiser level (e.g. *Spelling*), by stage
- 80 Chapter 5. Background notes
- 5.1. Development of the SNSA assessment instruments
- 5.2. Quality assurance
- 5.3. Number of assessments completed / maximum number possible
- 5.4. Development of the SNSA long scales for future years' reporting

⁹ Each subsection to include quantitative information (tables/graphs) and some description – e.g. comment on stronger and weaker capacity demonstrated across categories of each characteristic; comment on differential rate of improvement in capacity at different stages / for different assessments.

¹⁰ For this and the next two sections, use time of year breakdown. Can investigate whether this breakdown is useful for other characteristics.

¹¹ White Scottish and Other? Or finer categorisation – preference of SG?

¹² Each subsection to include quantitative information (tables/graphs) and some description – e.g. comment on stronger and weaker capacity demonstrated across categories of each characteristic; comment on differential rate of improvement in capacity at different stages / for different assessments. Suggest restricting this level of analysis to Gender and SIMD subgroups.
