Dead/weak/abnormally behaving fish present? Clinical signs of disease observed? Gross pathology observed? Diagnostic samples taken? If yes, see additional information/clinical score sheet. If yes, see additional information/clinical score sheet.								
UNI/REG only - if unable to carry out intended visit detail reason below:								

Additional Case Information:

1.38% mortality during wk16 5753. Transfer and handling mortalities. There were fish being transferred from Euhglim FS1233 on the 06-07/03 and 21/03. Transfer and handling caused some scaling and physical damage of the fish. Some of the pens at FS1233 were needing to be thinned down, so fish were brought over to harvest at this site as well,.

Mortality in last 4 weeks:

16 – 1.38% (5753) 17 – 0.86 (3347) 18-0.26 (931) 19-0.39 (1372) 20- 0.20 (675)

Hydrolicer in December and the optilicer at the end of January. Hydrolicer treatment in Feb. Slice and Alphamax treatments on different cages. April and May Hydrolicer treatments

Routine health checks still being carried out on the fish, no significant results noted during period checked.

Sea lice level have been up and down and reports have been sent for those weeks which were over two. The last report was sent in February 2020 week 5 when ongoing storms meant they couldn't get access to the farms. The last 4 weeks have been

WK 16 - 1 AF WK17 - 0.51 18 - 1.05 19 - 0.04 20 - 0.19

Only operators in Loch Roag, area is fallowed and stocked synchronously

FISH HEALTH INSPECTORATE VISIT REPORT

SUMMARY FOR INFORMATION OF SITE OPERATOR

BUSINESS NO FB0169 SITE NO FS1103 INSPECTOR DATE OF CASE 29/04/2020 SITE NAME Vuia Mor CASE NO 20200110

Passive Surveillance Inspection

A notification of mortality levels above the reporting criteria was received by the Fish Health Inspectorate on 28/04/2020.

Due to current government advice regarding the on-going situation with COVID-19 an inspection of the site could not be conducted. A passive surveillance inspection was conducted by telephone to gather information in accordance with the Aquatic Animal Health (Scotland) Regulations 2009. Information was also gathered in accordance with the Aquaculture and Fisheries (Scotland) Act 2007, as amended, with respect to section 3 regarding parasites (sea lice).

During week 16 there were 5753 (1.38%) mortalities attributed to transfer and handling. fish were transferred from Euhglim (FS1233) on the 06-07/03/2020 and 21/03/2020. Transfer and handling caused some scaling and physical damage of the fish leading to mortality.

The information required for the public record of aquaculture production businesses regarding this site was verified and where necessary updated.

The surveillance frequency category of the site was assessed as medium. An inspection under the Aquatic Animal Health (Scotland) Regulations 2009 will be conducted every second year. The category of the site will be reassessed on a routine basis and updated as required.

Mortality levels had exceeded the reporting criteria since the last inspection and had been reported to the Fish Health Inspectorate as required.

Please contact myself or the duty inspector should you require any further information or have any queries regarding this report.

Fish Health Inspector

Date: 12/04/2021

The Fish Health Inspectorate Service Charter detailing standards of service is available on the Marine Scotland website at https://www.gov.scot/publications/fish-health-inspectorate-service-charter/
